

Abstract

A plasma display panel that is capable of improving a contrast as well as reducing the power consumption. In the
5 plasma display panel, a distance between the sustaining electrode pair at a display region is different from that at a non-display region. A width of the barrier rib at the display region is different from that at the non-display region. The non-display region is provided with black
10 matrices for shutting off a light.
A protective layer is provided only at the display region.
